REDBELLY DAO

RBNT Holder Report Q3 2026

How RBNT holders behaved between 1 July 2026 and 30 September 2026: who holds the coins, how concentrated holdings are, who added and who reduced, and how staking changed. Read straight from the Redbelly chain.

QUARTERLY ON-CHAIN REPORT. EDITION 1

53,574

wallets held 1 RBNT or more on 30 September

53,417 on 30 June

754.8 million

RBNT held by the two Reddex staking pools

639.1 million on 30 June, +18.1%

76.7%

of wallet-held RBNT sits in the largest 100 wallets

75.8% on 30 June

5.93 billion

RBNT in Redbelly's nine reserved wallets

5.97 billion on 30 June

Snapshot blocks 3,025,809 (30 June 2026, 23:57:19 UTC) and 3,209,414 (30 September 2026, 23:57:35 UTC) on Redbelly mainnet, chain ID 151. Last verified 23 October 2026. Not financial advice.

AT A GLANCE

The quarter in six points

1. **Staking grew.** The two Reddex pools held 754.8 million RBNT at the end of the quarter, up from 639.1 million, a rise of 18.1%. Most of the rise was in the no lock pool, and most of that came in the week to 1 September 2026.
2. **Vesting contracts paid out.** Contracts whose verified code is a vesting manager held 1.68 billion RBNT at the start and 1.58 billion at the end. They sent 127.8 million to wallets during the quarter.
3. **The largest wallets added, on balance.** The 21 wallets that started the quarter with 10 million RBNT or more held 1.06 billion then and 1.09 billion at the end. 9 of them added more than 1%, 7 stayed within 1% and 5 reduced by more than 1%.
4. **Holdings stayed concentrated.** The largest 100 wallets held 76.7% of all RBNT held by wallets at the end, against 75.8% at the start. 12 wallets hold half of it.
5. **Reserved wallets mostly moved RBNT between themselves.** Ecosystem (Locked) sent 500.0 million to Ecosystem 2 (Unlocked), which sent 253.1 million on to Investors. Governance (Locked) sent 33.3 million to Governance (Unlocked). Only Ecosystem (Unlocked) sent RBNT outside the reserved group.
6. **A little more of the supply is now held by wallets.** Wallets held 1 RBNT or more at 53,574 addresses on 30 September, 157 more than on 30 June. Together with their wrapped and staked RBNT they held 1.96 billion RBNT, up from 1.82 billion.

READ THIS FIRST

This report describes what the public Redbelly chain shows. It is about trends, not people. It names only addresses that are already public: Redbelly's nine reserved wallets from the DAO treasury page, the Wrapped RBNT contract and the two Reddex staking pools. Routescan labels no exchange wallet on Redbelly, so none is named. Every other address appears only inside a group of at least five, never on its own.

The chain records that coins moved. It does not record why, or who controls an address. When a group's holdings fall, the coins left those addresses; that may be a sale, a move to another address of the same owner, or a deposit into a contract. This report makes no price forecast and gives no advice.

How to read the numbers

Start means block 3,025,809, the last block before midnight UTC at the end of 30 June 2026. **End** means block 3,209,414, the last block before midnight UTC at the end of 30 September 2026. Month-end and weekly figures use the last block before midnight UTC on those days. Amounts are in RBNT and rounded to whole coins; the data files keep the exact values. "Million" and "billion" are rounded to one or two decimals.

For every address we add three things: the RBNT it holds, the Wrapped RBNT (WRBNT) it holds and the RBNT it has staked in either Reddex pool. That way a holder who wraps or stakes is not counted as having sold. The RBNT sitting inside the WRBNT contract and the staked RBNT inside the pools is therefore counted once, with its owner.

SECTION 1

Every RBNT accounted for

All 10 billion RBNT were created in one allocation when the chain started. On 30 September we found 9,999,963,515 of them, 99.9996%, in the balances we read. Only 36,485 RBNT were not in any address we found.

A report about holders is only as good as its list of holders. Instead of trusting an explorer's list, we built our own: every address that sent or received a transaction or an internal transfer since the chain began, every address named in a block header, every address that ever touched WRBNT or a staking pool, and Routescan's own list of the largest addresses. That is 761,587 addresses. We then asked the Redbelly node for the balance of every one of them at each snapshot block.

Date (end of day UTC)	Block	Created at genesis	In all balances read	Not found	Found
30 June 2026	3,025,809	10,000,000,000	9,999,963,526	36,474	99.99964%
31 July 2026	3,104,242	10,000,000,000	9,999,963,484	36,516	99.99963%
31 August 2026	3,161,410	10,000,000,000	9,999,963,495	36,505	99.99963%
30 September 2026	3,209,414	10,000,000,000	9,999,963,515	36,485	99.99964%

Source: Redbelly mainnet balances at each block. Data: 01_supply_check.csv.

Where network fees go. Senders paid 2.0 million RBNT in network fees during the quarter, yet the total in all balances changed by only 11 RBNT. The fees were not destroyed: the network credited 2.0 million RBNT of them to 219 addresses, without a transaction, as a change in their balance. Apart from these credits, every address's balance at the end equals its balance at the start plus what it received minus what it sent and paid in fees, to the last unit. This is why we read balances directly instead of adding up transfers.

IN PLAIN WORDS

We checked the whole supply, not a sample. The coins we could not place come to about one in every 274,000, and that amount changed by only 11 RBNT during the quarter, so it cannot change any trend in this report.

SECTION 2

Who holds the RBNT

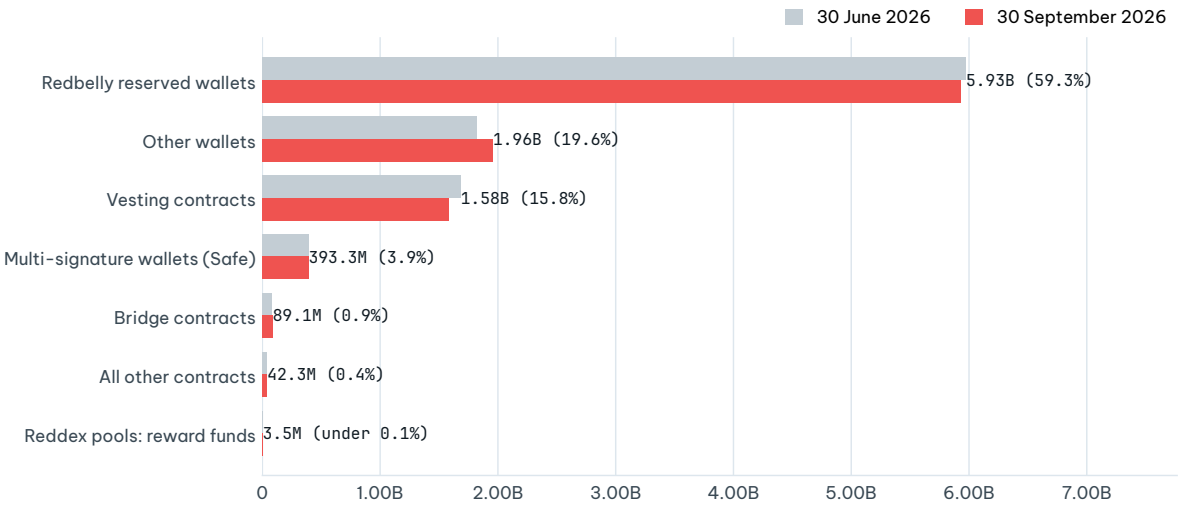

At the end of the quarter, 59.3% of all RBNT sat in Redbelly's reserved wallets, 19.6% with other wallets and 21.1% in other contracts. Most of the RBNT in contracts is in vesting contracts.

RBNT is the coin of the Redbelly network. Every coin sits at an address, and anyone can read the balance of any address. An address is either a **wallet**, controlled by a private key, or a **contract**, a program that holds coins under its own rules. Figure 1 adds up every holding and groups it by the kind of address that owns it.

FIGURE 1

Who holds the 10 billion RBNT

RBNT, WRBNT and staked RBNT counted with the address that owns them. Labels show 30 September and the share of supply

Source: Redbelly mainnet (chain ID 151), blocks 3,025,809 (30 June 2026, 23:57:19 UTC) and 3,209,414 (30 September 2026, 23:57:35 UTC). Last verified 23 October 2026.

Data: 06d_net_change_by_group.csv and 03_who_holds_the_rbnt.csv.

Contracts publish their code on the Routescan explorer when their authors verify it. The name in that code tells us what kind of program a contract is, though not who controls it. We use those names only to put contracts into groups, and only for kinds with at least five contracts; smaller kinds are counted under "Other verified contracts".

Kind of contract (from its verified code)	Contracts	30 June	30 September	Change
Vesting contracts	18	1,684,803,156	1,582,067,290	-102,735,866
Multi-signature wallets (Safe)	92	391,836,528	393,268,219	+1,431,692
Bridge contracts	6	84,881,987	89,118,004	+4,236,017
Unverified contracts	41	27,949,340	27,953,887	+4,547
Trading pools on decentralised exchanges	10	9,120,755	10,618,009	+1,497,254
Other verified contracts	8	3,651,818	3,663,528	+11,709
Other staking contracts	8	36,852	111,654	+74,801

Data: 06c_contracts_by_kind.csv. Contracts that held at least 1 RBNT on either date.

Vesting contracts hold coins and release them to set addresses over time. **Multi-signature wallets** need more than one key to move coins. **Bridge contracts** hold RBNT that has been

moved to or from other blockchains. **Trading pools** hold the coins people trade against on decentralised exchanges.

Where the coins physically sit

The view above counts wrapped and staked RBNT with its owner. The table below shows the same 10 billion RBNT by the address that physically holds it, so the WRBNT contract and the staking pools appear on their own.

Where the RBNT physically sits	30 June	Share	30 September	Share	Change
Redbelly reserved wallets	5,974,773,423	59.75%	5,930,961,030	59.31%	-43,812,393
Wrapped RBNT contract (backs WRBNT)	1,819,066,451	18.19%	1,736,902,022	17.37%	-82,164,429
Reddex pools: staked	635,763,148	6.36%	751,251,007	7.51%	+115,487,859
Reddex pools: reward funds	3,299,175	0.03%	3,525,545	0.04%	+226,370
Other wallets	1,109,439,526	11.09%	1,113,270,158	11.13%	+3,830,632
Other contracts	457,621,803	4.58%	464,053,752	4.64%	+6,431,949
Not found in any balance read	36,474	0.00%	36,485	0.00%	+11

Data: 02_where_the_rbnt_is.csv. Shares are of the 10 billion RBNT supply.

IN PLAIN WORDS

Six in every ten RBNT are in wallets Redbelly has publicly reserved for the team, investors, the ecosystem, governance, the reserve and research. About one in six is in vesting contracts. A little under one in five is held by all other wallets together.

SECTION 3

How many wallets hold RBNT

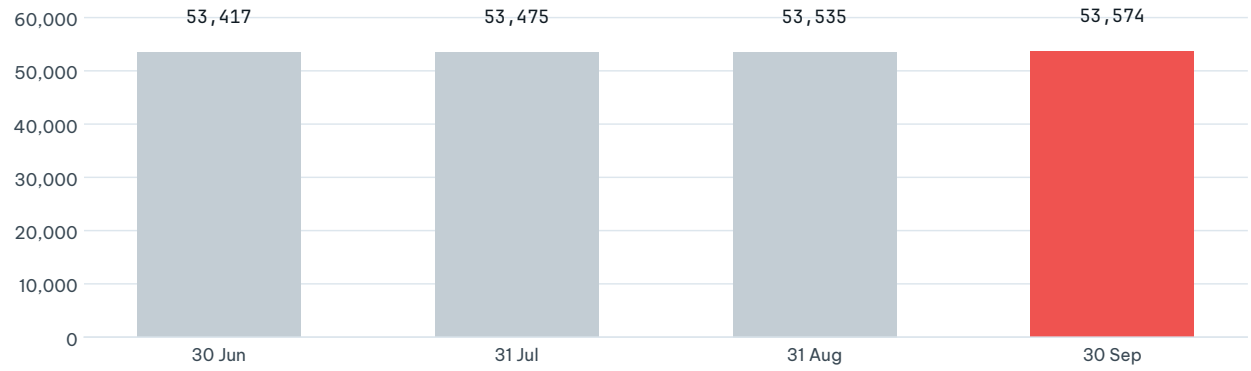

53,574 wallets held 1 RBNT or more at the end of the quarter, up from 53,417. The count rose in each month of the quarter.

This section looks at wallets outside the named addresses. Contracts are left out because one contract can hold coins for many people. We count a wallet once it holds at least 1 RBNT; another 111,509 wallets hold a fraction of a coin.

FIGURE 2

Wallets holding 1 RBNT or more, month by month

End of each month, UTC. RBNT, WRBNT and staked RBNT added together; named addresses and contracts left out

Source: Redbelly mainnet (chain ID 151), blocks 3,025,809 (30 June 2026, 23:57:19 UTC) and 3,209,414 (30 September 2026, 23:57:35 UTC). Last verified 23 October 2026.

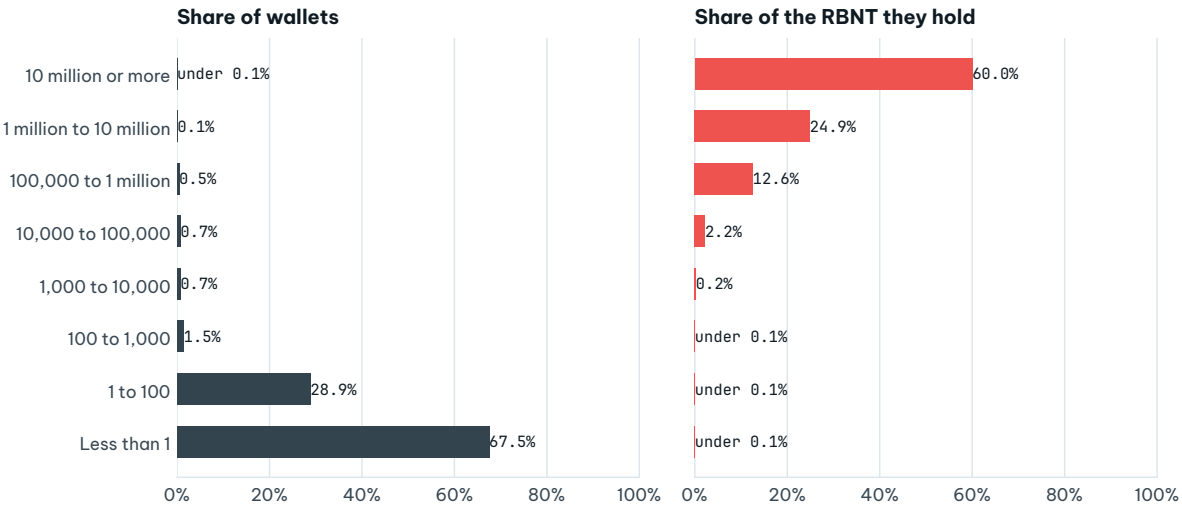

Data: 05_concentration.csv.

Between the two dates, 243 wallets reached 1 RBNT and 86 fell below it; 53,331 held 1 RBNT or more on both dates.

FIGURE 3

Most wallets are small; most RBNT sits in a few large ones

Wallets outside the named addresses, by size of holding, 30 September 2026 (RBNT, WRBNT and staked RBNT added together)

Source: Redbelly mainnet (chain ID 151), blocks 3,025,809 (30 June 2026, 23:57:19 UTC) and 3,209,414 (30 September 2026, 23:57:35 UTC). Last verified 23 October 2026.

Holding size (RBNT)	Wallets 30 June	Wallets 30 Sept	Change	RBNT held 30 June	RBNT held 30 Sept
10 million or more	21	23	+2	1,060,403,622	1,175,735,412
1 million to 10 million	180	183	+3	467,012,595	487,522,039
100,000 to 1 million	818	810	-8	243,421,511	246,222,043
10,000 to 100,000	1,226	1,228	+2	42,928,601	43,262,542
1,000 to 10,000	1,177	1,209	+32	4,536,394	4,616,529
100 to 1,000	2,387	2,448	+61	704,848	721,079
1 to 100	47,608	47,673	+65	543,071	544,455
Less than 1	111,395	111,509	+114	23,908	23,987
Contracts (all sizes)	205	208	+3	2,202,280,441	2,106,800,596

Data: 04_holders_by_size.csv (also has the month-end counts).

One address is not one person. A person can use many addresses, and many people can share one. Counts of wallets show how widely RBNT is spread across addresses, not how many people hold it.

IN PLAIN WORDS

Most wallets hold small amounts: 96% of the wallets that hold anything have less than 100 RBNT. Most of the coins are in a small number of large wallets.

SECTION 4

How concentrated holdings are

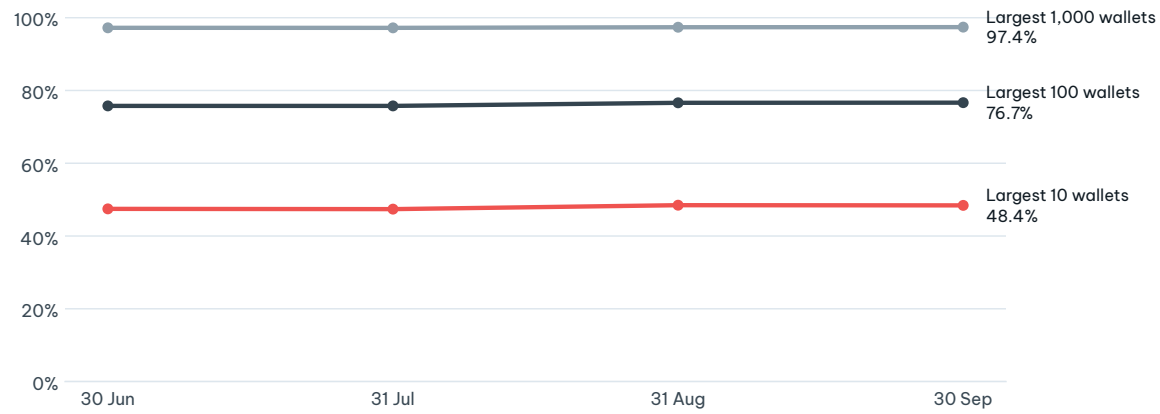

The largest 10 wallets held 48.4% of all RBNT held by wallets at the end of the quarter, against 47.5% at the start. The largest 100 held 76.7%, against 75.8%.

Concentration asks how much of the coins held by wallets sits with the biggest ones. Wallets are ranked by size on each date, so the largest 10 at the end are not always the same wallets as at the start: 9 wallets were in the largest 100 at the end but not at the start.

FIGURE 4

How much of the wallets' RBNT the largest wallets hold

Share of all RBNT held by wallets with 1 RBNT or more, end of each month

Source: Redbelly mainnet (chain ID 151), blocks 3,025,809 (30 June 2026, 23:57:19 UTC) and 3,209,414 (30 September 2026, 23:57:35 UTC). Last verified 23 October 2026.

End of	Wallets 1+ RBNT	Largest 10	Largest 100	Largest 1,000	Gini	Wallets holding half
30 June 2026	53,417	47.5%	75.8%	97.2%	0.9951	12
31 July 2026	53,475	47.4%	75.8%	97.2%	0.9951	12
31 August 2026	53,535	48.5%	76.6%	97.4%	0.9953	11
30 September 2026	53,574	48.4%	76.7%	97.4%	0.9953	12

Data: 05_concentration.csv. Wallets with 1 RBNT or more; named addresses and contracts are left out.

The **Gini coefficient** sums up the whole spread in one number between 0 (every wallet holds the same) and 1 (one wallet holds everything). It was 0.9951 at the start and 0.9953 at the end. Values this close to 1 are usual when there are tens of thousands of small wallets and a few very large ones.

IN PLAIN WORDS

Holdings were highly concentrated and became slightly more so. 12 wallets together hold half of all RBNT held by wallets, and 348 hold nine tenths.

SECTION 5

What the largest holders did

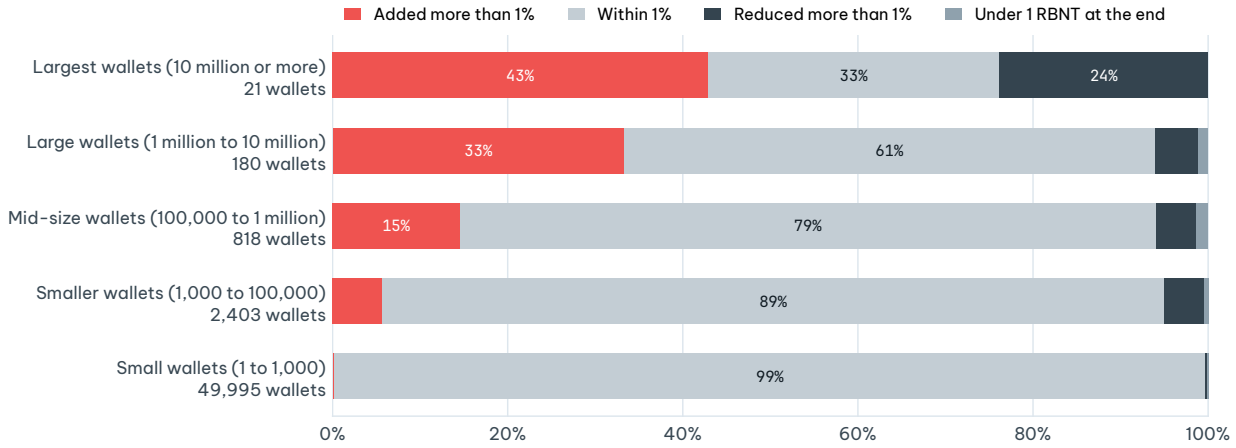

Wallets of every size added RBNT on balance during the quarter. Most of it came from vesting contracts, which sent 127.8 million RBNT to wallets.

To see buying and selling without singling anyone out, we put wallets into five groups by their holding at the start of the quarter, then followed the same wallets to the end. A wallet "added" if it ended with more than 1% more, "reduced" if it ended with more than 1% less, and was "within 1%" otherwise. Staking or wrapping does not count as a change.

FIGURE 5

What the same wallets did between 1 July and 30 September

Wallets grouped by their holding at the start of the quarter; each bar shows what share added, held or reduced

Source: Redbelly mainnet (chain ID 151), blocks 3,025,809 (30 June 2026, 23:57:19 UTC) and 3,209,414 (30 September 2026, 23:57:35 UTC). Last verified 23 October 2026.

Size at start (RBNT)	Wallets	Added	Within 1%	Reduced	Below 1 at end	Net change (RBNT)	Change
10 million or more	21	9	7	5	0	+30.6 million	+2.9%
1 million to 10 million	180	60	109	9	2	+10.3 million	+2.2%
100,000 to 1 million	818	119	650	38	11	+4.9 million	+2.0%
1,000 to 100,000	2,403	136	2,147	109	11	+62.1 million	+130.8%
1 to 1,000	49,995	113	49,736	84	62	+18.4 million	+1473.5%

Data: 06_cohorts.csv (also has month-end totals for each group).

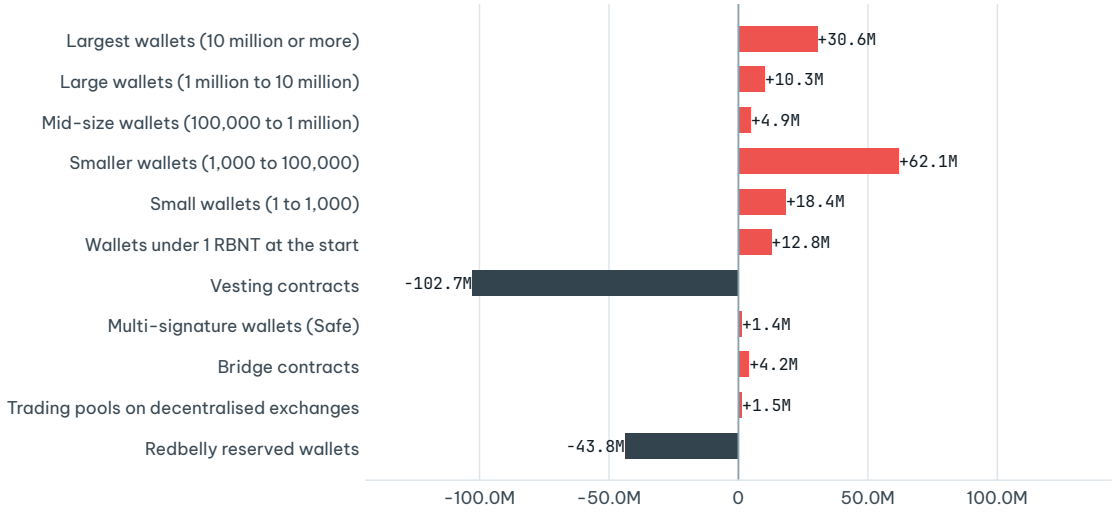

The largest wallets. The 21 wallets with 10 million RBNT or more at the start held 1.06 billion RBNT then and 1.09 billion at the end, a change of 2.9%. 9 added, 7 stayed within 1% and 5 reduced. The 180 wallets with 1 million to 10 million went from 467.0 million to 477.3 million; 60 added and 9 reduced.

Most wallets did not move. In every group below 1 million RBNT, at least 79% of wallets ended the quarter within 1% of where they started.

FIGURE 6

Which groups gained and which gave up RBNT

Change in holdings between 30 June and 30 September. Wallet groups are fixed by size at the start

Source: Redbelly mainnet (chain ID 151), blocks 3,025,809 (30 June 2026, 23:57:19 UTC) and 3,209,414 (30 September 2026, 23:57:35 UTC). Last verified 23 October 2026.

Data: 06d_net_change_by_group.csv. All groups together add up to the 10 billion supply, so the changes sum to zero.

Where the added coins came from. Figure 6 shows which groups gained and which gave up RBNT. Vesting contracts gave up 102.7 million and the reserved wallets 43.8 million. On the other side, every wallet group gained. The smaller wallets (1,000 to 100,000 RBNT at the start) more than doubled their holdings, from 47.5 million to 109.5 million. Vesting contracts sent 61.5 million RBNT to wallets in this group and 21.2 million to wallets in the small group (1 to 1,000 RBNT at the start). Some of these wallets ended the quarter much larger: 259 wallets moved up two or more size bands, while 100 moved down two or more.

Vesting contracts sent RBNT to	RBNT
Smaller wallets (1,000 to 100,000)	61,533,640
Largest wallets (10 million or more)	29,594,672
Small wallets (1 to 1,000)	21,155,750
Redbelly reserved wallets	9,613,167
Mid-size wallets (100,000 to 1 million)	7,904,692
Large wallets (1 million to 10 million)	7,654,791

Data: 12_group_flows.csv. RBNT and WRBNT transfers between the two snapshot blocks.

IN PLAIN WORDS

On the chain, the quarter looks like RBNT moving out of vesting contracts and reserved wallets and into ordinary wallets, directly or through vesting contracts and staking rewards, rather than wallets emptying. A fall in a group's total would mean coins left those addresses; it would not show whether they were sold, moved to another address of the same owner, or put into a contract. The chain records movements, not reasons.

SECTION 6

Staking in the Reddex pools

The two Reddex RBNT staking pools held 754.8 million RBNT at the end of the quarter, up from 639.1 million at the start. The no lock pool grew by 22.9% and the 365 day pool by 11.9%.

Staking means putting RBNT into a contract to earn rewards. Reddex runs two RBNT pools: in the **no lock** pool a stake can be taken out at any time; in the **365 day** pool each stake is locked for a year. Both pay rewards in RBNT.

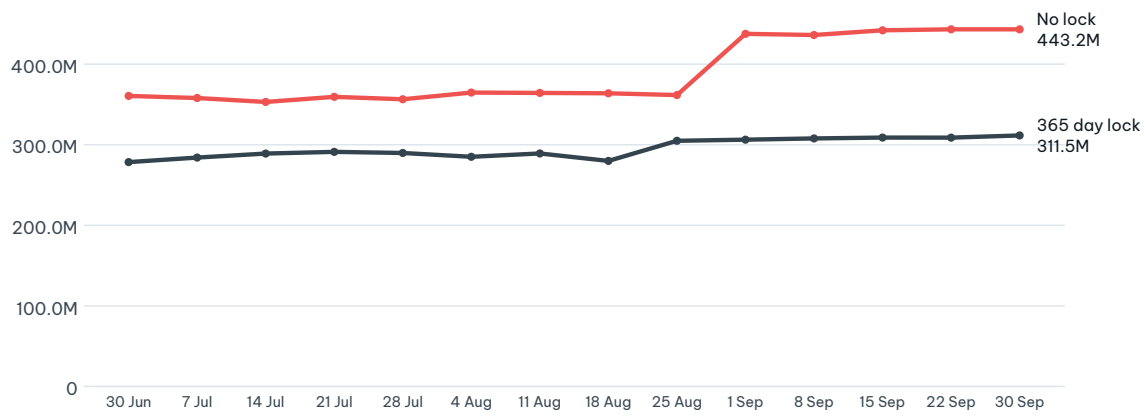

Pool	RBNT balance 30 June	RBNT balance 30 Sept	Change	Change %
No lock pool	360,594,599	443,228,206	+82,633,607	22.9%
365 day lock pool	278,467,724	311,548,346	+33,080,622	11.9%
Both pools	**639,062,323**	**754,776,552**	**+115,714,229**	**18.1%**

Source: each pool's RBNT balance read from the node at blocks 3,025,809 and 3,209,414. Data: 10_staking_pools.csv.

FIGURE 7

RBNT held by the two Reddex staking pools, week by week

Each pool's RBNT balance at the end of each week (UTC). The balance includes reward funds as well as stakes

Source: Redbelly mainnet (chain ID 151), weekly blocks from 3,025,809 (30 June 2026, 23:57:19 UTC) to 3,209,414 (30 September 2026, 23:57:35 UTC). Last verified 23 October 2026.

Data: 07_weekly_named_addresses.csv (weekly blocks listed in the file).

The no lock pool's balance rose by 76.0 million RBNT in the week from 25 August 2026 to 1 September 2026, its biggest weekly change of the quarter.

A POOL'S BALANCE IS MORE THAN ITS STAKES

Rewards are paid in RBNT out of each pool's own balance, so a pool's balance may include reward funds as well as stakes. The pools' verified code keeps its own count of staked RBNT, called `totalStake`; the rest of the balance is reward funds. The table below splits the two. The staked figures are the ones counted with each staker in sections 2 to 5.

	No lock 30 June	No lock 30 Sept	365 day 30 June	365 day 30 Sept
Staked (the pool's own totalStake)	358,606,856	440,677,250	277,156,292	310,573,758
Reward funds (balance minus staked)	1,987,743	2,550,956	1,311,432	974,589
Addresses with a stake	1,156	1,140	223	217

Staked RBNT in both pools went from 635.8 million to 751.3 million. That is 18.5% of all RBNT held outside the named addresses, up from 15.8%. 1,255 addresses had a stake in at least one pool at the end.

FIGURE 8

RBNT moved into and out of the pools during the quarter

Sums of the pools' own Stake, Unstake and reward claim events between the two snapshot blocks

Source: Redbelly mainnet (chain ID 151), blocks 3,025,809 (30 June 2026, 23:57:19 UTC) and 3,209,414 (30 September 2026, 23:57:35 UTC). Last verified 23 October 2026.

During the quarter	No lock pool	365 day pool
Stakes	132,965,677 RBNT (262 by 119 addresses)	63,401,240 RBNT (227 by 69 addresses)
Unstakes	50,895,283 RBNT (102 by 63 addresses)	29,983,775 RBNT (51 by 37 addresses)
Reward claims	4,436,787 RBNT (512 by 166 addresses)	10,336,843 RBNT (523 by 99 addresses)
Sent in as reward funds	5,000,000 RBNT	10,000,000 RBNT

Data: 10_staking_pools.csv, from the pools' Stake, Unstake and reward claim events. For each pool, stakes minus unstakes equal the change in totalStake exactly.

Who topped up the reward funds. The only plain transfers into the pools came from Ecosystem (Unlocked), a reserved wallet named on the DAO treasury page. Read from the chain at both snapshot blocks, the owner of both pools is that same wallet.

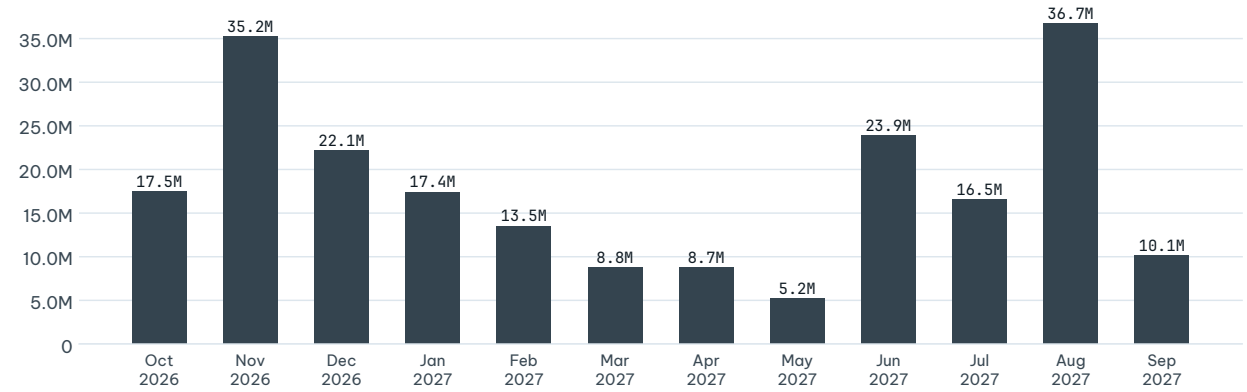

When locked stakes can be withdrawn

Of the 310.6 million RBNT staked in the 365 day pool at the end of the quarter, 94.8 million had already passed the end of its lock and 74.9 million reaches the end of its lock between October and December 2026. A lock ending only means the RBNT can be taken out. It does not mean it will be.

FIGURE 9

When stakes in the 365 day pool reach the end of their lock

RBNT staked in the 365 day pool on 30 September 2026, by the month each stake's lock ends (UTC)

Source: Redbelly mainnet (chain ID 151), blocks 3,025,809 (30 June 2026, 23:57:19 UTC) and 3,209,414 (30 September 2026, 23:57:35 UTC). Last verified 23 October 2026. A lock ending does not mean the RBNT will be unstaked.

Data: 11_lock_calendar.csv, read from the pool's getStakeUnlockTimes for every staker at block 3,209,414.

SECTION 7

The publicly named wallets

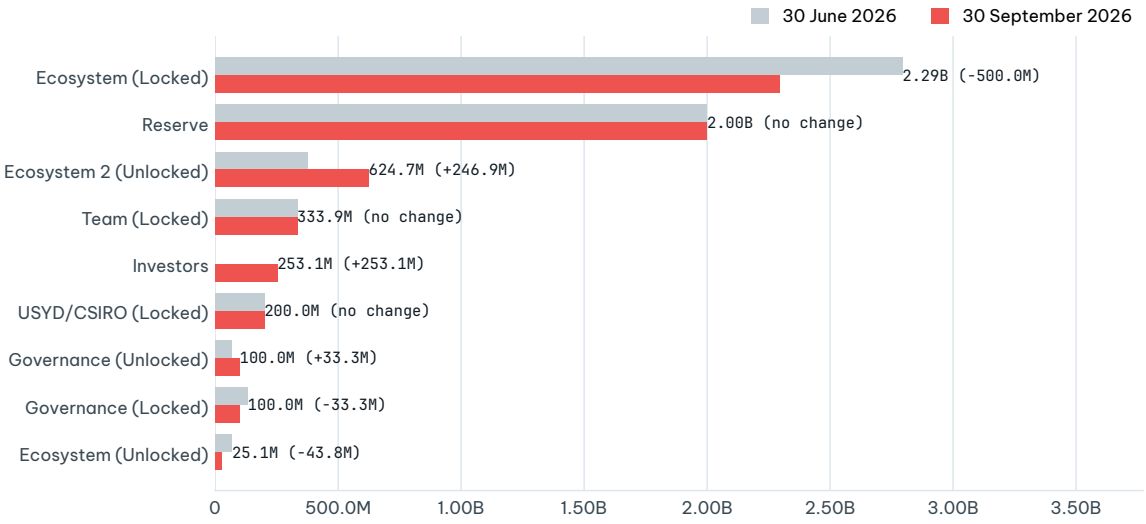

Redbelly's nine reserved wallets held 5.97 billion RBNT at the start and 5.93 billion at the end. Most of the movement was between reserved wallets. Only Ecosystem (Unlocked) sent RBNT outside the group.

The DAO treasury page lists nine wallets Redbelly has reserved, with the amount each was given at launch. Those amounts are allocations, not balances, so we read each wallet's balance from the chain on both dates and traced every transfer in between. For every wallet, the balance at the start plus everything received minus everything sent and paid in fees equals the balance at the end, to the last unit.

FIGURE 10

RBNT in Redbelly's nine reserved wallets

Native RBNT balance of each wallet listed on the DAO treasury page, start and end of the quarter

Source: Redbelly mainnet (chain ID 151), blocks 3,025,809 (30 June 2026, 23:57:19 UTC) and 3,209,414 (30 September 2026, 23:57:35 UTC). Last verified 23 October 2026.

Reserved wallet and address	Allocation (treasury page)	30 June	30 Sept	Change	Transfers in / out
Team (Locked) `0xbcee2defb7cf136480e3619cf93e8129059977af`	1,000,000,000	333,909,314	333,909,314	0	0 / 0
Governance (Locked) `0x9a83957d3399cbbcbef2112797b4a5b8e58c63d4`	200,000,000	133,333,334	100,000,001	-33,333,333	0 / 1
Governance (Unlocked) `0x9e678318539d7c98057e9f89c58fb8f99752faea`	100,000,000	66,666,756	100,000,089	+33,333,333	1 / 0
USYD/CSIRO (Locked) `0xac27381ef74457c1258d54a808c2461eedc56270`	200,000,000	200,000,000	200,000,000	0	0 / 0
Investors `0xef816d556e01bc194ae302999930eacd6dc4e566`	2,785,987,083	0	253,115,670	+253,115,670	1 / 0
Reserve `0x7473feaf836b5319d9190d8367991dc6ef33c16d`	2,000,000,000	2,000,000,000	2,000,000,000	0	0 / 0
Ecosystem (Locked) `0xc5c131572d232512973e79204b93c2c1d57c879d`	2,794,132,788	2,794,132,788	2,294,132,788	-500,000,000	0 / 1
Ecosystem 2 (Unlocked) `0xe0c701c40166bbd8d5f5ec33c123f0a03e902df7`	not listed	377,838,567	624,722,897	+246,884,330	1 / 1
Ecosystem (Unlocked) `0x415cad8fc89f75a63c5b830e06460eecde083c9f`	919,880,129	68,892,664	25,080,271	-43,812,393	0 / 31

Data: 08_named_addresses.csv (also has fees, WRBNT held and the reconciliation gap for each wallet) and 09_reserved_wallet_flows.csv.

What moved

Ecosystem (Locked) sent 500.0 million RBNT to Ecosystem 2 (Unlocked), which sent 253.1 million on to the Investors wallet. Governance (Locked) sent 33.3 million to Governance (Unlocked). None of these transfers left the reserved group. Team (Locked), USYD/CSIRO (Locked) and Reserve did not move.

Ecosystem (Unlocked) made 31 transfers out, 43.8 million RBNT in total, and paid 15,724 RBNT in network fees.

Ecosystem (Unlocked) sent RBNT to	RBNT
Wrapped into WRBNT (sent to the WRBNT contract)	25,100,000
Reddex 365 day pool, as reward funds	10,000,000
Reddex no lock pool, as reward funds	5,000,000
14 unlabelled wallets and contracts	3,696,669

It also moved WRBNT: it sent 34.7 million WRBNT to vesting contracts and received 9.6 million WRBNT from vesting contracts. These are the only WRBNT transfers by a reserved wallet in the quarter.

Wrapped RBNT

The WRBNT supply fell from 1.82 billion to 1.74 billion: 38.7 million RBNT was wrapped and 120.8 million unwrapped. On both dates the supply equalled the RBNT held by the WRBNT contract and the sum of all WRBNT balances, to the last unit, so each WRBNT was backed by one RBNT. The contract's RBNT is counted once in this report, with whoever holds the WRBNT.

Exchanges

The brief asks for flows in and out of labelled exchange wallets. On 23 October 2026, Routescan's public address list for Redbelly mainnet gave a name to only one address, the Wrapped RBNT contract, among the 10,042 largest addresses it lists (down to a balance of 125 RBNT). It labelled no exchange wallet. With no public label to go by, this edition reports no exchange flows. Treating an unlabelled address as an exchange would be a guess about who

controls it, which this report does not make. The method explains how the next edition picks up labels once Routescan publishes them.

SECTION 8

Method

Everything in this report comes from public chain data, read at fixed blocks, with scripts anyone can run. METHOD.md in the data package gives every call in detail; this is the short version.

1. **Fix the moments.** For each date, find the last block before midnight UTC by binary search on block times from the Redbelly node, and check it against Routescan's getblocknobytime.
2. **Find every address.** Read every transaction receipt from block 0 to block 3,209,414 (3,209,415 blocks), every block header, all 1,753,030 internal transfers from Routescan, every WRBNT and staking event, and Routescan's address list. This gives 761,587 addresses.
3. **Read balances.** Ask the node for the RBNT balance of every address at each month-end block, the WRBNT balance of every address that ever held WRBNT, and the stake of every address that ever staked.
4. **Count each coin once.** Add each address's RBNT, WRBNT and staked RBNT. Leave out the WRBNT contract's RBNT (it backs the WRBNT) and the staked part of each pool (it belongs to the stakers). The rest of each pool's balance is its reward funds.
5. **Sort addresses.** Named addresses are reported by name. Every other address is a wallet (no code) or a contract (has code at the end block). Contracts are grouped by the name in their verified code, only where five or more share a kind.
6. **Follow movements.** Take every transaction and internal transfer between the two blocks, and every WRBNT transfer, and add them up by group. Check that every named address reconciles to the last unit.
7. **Check.** The scripts stop if any of the checks below fails. A separate script then re-reads the headline figures from the node and scans every file for anything the brief forbids.

POOL BALANCES INCLUDE REWARD FUNDS

Rewards in both Reddex pools are paid in RBNT from the pool's own balance, so a pool balance may include reward funds as well as stakes. The headline staking figures use the pools' RBNT balances, as the brief asks. The split into staked RBNT and reward funds uses the pools' own totalStake.

Checks that passed on this data

57 checks in all, listed one by one in figures.json. Each is an exact equality in wei.

- ✓ WRBNT totalSupply equals RBNT held by the WRBNT contract (4 times)
- ✓ Sum of WRBNT balances equals WRBNT totalSupply (4 times)
- ✓ Stakers' amounts add up to totalStake (8 times)
- ✓ Where-RBNT-sits groups add up to 10 billion (4 times)
- ✓ Ownership groups add up to 10 billion (4 times)
- ✓ Cohort start total matches (5 times)
- ✓ Cohort end total matches (5 times)
- ✓ Contract groups plus contracts under 1 RBNT add up to all contracts at the end
- ✓ No followed wallet became a contract during the quarter
- ✓ Net changes of all groups add up to zero
- ✓ Named address reconciles to the wei (12 times)
- ✓ Plain transfers into the pool equal money in minus stakes (2 times)
- ✓ Stakes minus unstakes equal the change in totalStake (2 times)
- ✓ Lock calendar adds up to totalStake at the end (2 times)
- ✓ No address lost RBNT that no transfer or fee explains
- ✓ Fee credits are no larger than the fees paid

What the chain does not show

Who controls an address, why coins moved, and whether a transfer was a sale. This report describes movements only.

SECTION 9

Sources and data

Every figure is a balance or event on the Redbelly chain at block 3,025,809 (30 June 2026, 23:57:19 UTC), block 3,209,414 (30 September 2026, 23:57:35 UTC), a month-end or weekly block listed in the data files, or an event between them. All sources were read on 23 October 2026.

Source	Where	What we read	Read on
Redbelly mainnet RPC, chain ID 151	`governors.mainnet.redbelly.network`	Balances, WRBNT balances and supply, pool totalStake, stakes and lock times at the snapshot blocks; every receipt and block header since block 0; contract code	23 October 2026
Routescan API (Etherscan compatible)	`api.routescan.io/v2/network/mainnet/evm/151/etherscan/api`	Internal transfers since block 0; verified source code of the pools, WRBNT and holding contracts; block number by time (cross-check)	23 October 2026

Words used

Address
A public account on the chain, written as 0x followed by 40 characters.

Wallet
An address controlled by a private key. It holds no code.

Contract

An address that runs code, such as a staking pool, a vesting contract or a multi-signature wallet.

Block
A batch of transactions. Each block has a number and a time, so a block number fixes a moment.

Staking
Putting RBNT into a contract to earn rewards.

WRBNT
Wrapped RBNT, a token backed one to one by RBNT held in the WRBNT contract, used by apps.

Vesting contract
A contract that holds coins and releases them to set addresses over time.

Reserved wallets
The nine wallets on the DAO treasury page: team, investors, reserve, ecosystem, governance and USYD/CSIRO.

Gini coefficient
One number for how unevenly coins are spread: 0 is perfectly even, 1 is one holder with everything.
